DISCLAIMERS & DISCLOSURES

General Disclosure

Finna provides access to licensed node software and other services designed for use integrated with decentralized blockchain infrastructure networks. Finna acts solely as a commercial reseller of such software and services and does not operate, manage, or control any decentralized blockchain network.

Network Independence

Decentralized blockchain networks are independently maintained by distributed participants. Network performance, governance, transactional validation, and protocol-level digital reward mechanisms are determined through decentralized processes and are not directed or controlled by Finna.

Digital Reward Distribution

Protocol-level digital rewards, where applicable, may be distributed by decentralized blockchain networks to independently operated nodes based on measurable operational factors such as uptime or validation performance. Any such digital rewards are determined solely by network-level protocol rules and are not issued, guaranteed, or controlled by Finna.

No Financial Product

Licensed node software is intended for functional use within decentralized infrastructure networks. Digital rewards distributed by decentralized protocols should not be interpreted as financial products, passive income streams, or investment returns. A node is not a financial tool.

Affiliate Compensation

Affiliates may be eligible to receive commissions denominated in fiat or government-issued currency in connection with the sale of licensed software products and services in accordance with applicable affiliate agreements.

Jurisdictional Availability

Services described on this Website may not be available in all jurisdictions. Users are responsible for determining whether use of licensed software is permitted under applicable local laws.
